.htaccess not working in LAMP

i used CI, i downloaded project from server it has a .htaccess file. when i run these project in my localhost is not working, i have to put index.php after project path , like example.com/index.php/controller/method. there is read/write rule in .htaccess file. for run .htacces i use these much but still not working. In `/etc/apache2/sites-available/default` modify the line containing `AllowOverride None` to read `AllowOverride All` . and then restart apache. for check read/write rule enable or not i run `a2enmod rewrite` it's shows `Module rewrite already enabled` . so, how can i run .htaccess file, i want to remove index.php from URL in my CI from localhost.

.htaccess | codeigniter | codeigniter-url

1 Answer

Add the following to the .htaccess file and keep the file in your document root

```
DirectoryIndex index.php
```
